PROFESSIONAL SUMMARY

Front-end engineer with 4+ years of experience building production web applications with React, Next.js, and TypeScript. Experienced in role-based enterprise dashboards, analytics and reporting systems, API-driven interfaces, real-time updates, performance optimization, and scalable component architecture. Strong background in translating complex operational workflows into responsive, maintainable user experiences and collaborating with backend engineers in product teams.

TECHNICAL SKILLS

Core: JavaScript (ES6+), TypeScript, React, Next.js, HTML5, CSS3, Responsive Design | State & Data: React Query, Redux Toolkit, Context API, REST APIs, React Hook Form | UI: Tailwind CSS, SCSS, Material UI, Bootstrap, ECharts, Framer Motion | Engineering: App Router, SSR, SSG, PWA, Code Splitting, Performance Optimization, Role-Based Access, Socket.IO, Git, GitHub, Agile

PROFESSIONAL EXPERIENCE

Golestan Company - Taskino CRM

May 2026 - Present

Contract Front-End Developer

- Own front-end development of an enterprise CRM with three role-based dashboards for specialists, supervisors, and managers.
- Delivered reporting, approval, recurring-schedule, deadline, rating, leave-management, notification, and performance-analysis workflows.
- Built Jalali date filtering, interactive analytics, drag-and-drop boards, calendar overlays, live spent-time indicators, and real-time maintenance flows using Socket.IO.
- Improved reliability of complex server-state workflows through React Query cache synchronization, role-aware UI logic, and reusable component patterns.

Polyshot.io

2025 - Mar 2026

Front-End Developer

- Improved rendering performance across data-driven views and resolved real-time update inconsistencies affecting interface reliability.
- Created reusable components and shared UI patterns that reduced duplication and accelerated delivery of new product features.

lu.meme

2024 - 2025

Front-End Developer

- Developed a Next.js application for exploring, minting, and trading meme assets on the Stellar network.
- Integrated Stellar and platform APIs for assets, pools, balances, holders, liquidity, volume, and transaction data.
- Built market charts, favorites, profile, swap, liquidity, and PWA flows; reduced loading overhead through code splitting, query optimization, and hydration fixes.

Salmoon.com

2024

Front-End Developer

- Improved mobile responsiveness, reduced unnecessary React re-renders, and strengthened validation across the appointment-booking experience.

Lumenswap.io

2022 - 2023

Front-End Developer

- Built reusable responsive components and optimized motion and interaction patterns for a production cryptocurrency web application.

Zobahan Occupational Medicine Web App

2022

Front-End Developer

- Developed authenticated, permission-based workflows for doctors, nurses, laboratory staff, managers, and other authorized users.
- Collaborated with backend engineers to integrate REST APIs for storing, updating, and retrieving patient medical records.

EDUCATION

B.Sc. in Computer Science (Software Engineering) - Shahin Shahr Azad University | 2019 - 2023 | GPA: 16/20
